# NATIONAL HEALTH RECORD

---

## Preparation of rules and regulations

National health care reform through widespread adoption and use of electronic health records is an important breakthrough in the way care is delivered with advancement and ease of technology is the primary steps in building sophisticated architecture for National Health Record or unified

A unified electronic health record is a systematic collection of electronic health information about an individual patient or population. It is a record in digital format that is theoretically capable of being shared across different health care settings (government and private institutions). Implementation of unified electronic health records includes:

**M<sup>3</sup>IT** *YOUR STRATEGIC PARTNER* immensely provide its experience and knowledge in preparing the rules and regulations to consider in developing a sophisticated National Health Record to achieve its objectives and encourage value of its meaningful use as patient-centered, evidence-based, preventive-oriented, efficient, and secured to ensure public confidence and trust that their health information is protected.

- 
- Interoperability enables the health care provider to access and exchange patient information electronically.
  - Automated share, update and aggregate patient information from multiple data sources / health care facilities.
  - Accessibility of multimedia information, such as medical imaging results, accessible among locations.
  - Improve quality health care through information standardization and streamlined work process.
  - Provision of decision support systems (DSS) for healthcare professionals.
  - Promote data quality and consistency, exchange, security, and privacy
-
