

Process Automation

Automation of Sick-leave Issuance and Release Process

Minimize procedures for service provision and provide service efficiently and effectively

Towards Saudi Health Council long-term strategy to automate and unify systems, M³IT have shared its knowledge and long years of experience in system implementations. The M³IT team led the SHC requirement evaluation and prepared the Electronic Sick Leave request for proposals (RFP). It also performed system analysis to consider not only system fundamentals but also the extended and new functions

e-Sickleave

Electronic sick leave system is an application designed to support automated issuance and attestation of sick leave statements. With Electronic Sick Leave system implementation, streamlined process for notification and recording will be automated and government and private sectors' authorized users will be able to securely access the system for verification of sick leave issued to the patient with the patient's details and period of sick leave recommended

Modify the health information systems and introduce its recent technologies and expand in its usage in all sectors and health facilities.

** SHC General Strategic Objective
